IN THE CLAIMS:

-- 15. A reclining seat comprising:

a seat cushion having a seat cushion frame and a seat back having a seat back frame; and
a reclining mechanism for inclining said seat back relative to said seat cushion, said reclining mechanism comprising:

a first link having a first end rotatably mounted on said seat cushion frame to define a first center of rotation of inclining movement of said seat back relative to said seat cushion and a second end extending from said first end away from said seat cushion;

a second link having a first end rotatably mounted on said seat cushion frame to define a second center of rotation of said reclining mechanism and a second end extending from said first end of said second link away from said seat cushion and connected to said second end of said first link;

said first link and said second link each being longitudinally rigid and non-extensible; and

said first center of rotation being located forwardly of said second center of rotation relative to a front of said reclining seat.

2. A reclining seat as claimed in claim 1, wherein said second ends of said first link and said second link are connected by a third link.
